

AMENDMENTS TO THE CLAIMS

1. (currently amended) A valuables case ~~(1)~~ having an interior ~~(2)~~ for holding securities, ~~with the following features comprising:~~

a) a safety device having

a1) at least one holding chamber ~~(5, 6)~~ for a liquid ~~(7)~~, particularly an ink, and

a2) a measuring and triggering device for registering at least one parameter of the valuables case and for triggering release of the liquid ~~(7)~~ from the holding chamber ~~(5, 6)~~ into the valuables container on the basis of the measured parameter,

~~characterized by~~

b) at least one vibration generator ~~(14)~~ associated with the safety device for ~~the purpose of~~ generating vibrations in the liquid ~~(7)~~ in the at least one holding chamber ~~(5, 6)~~, and

c) the measuring and triggering device being designed to register at least one vibration parameter and to release the liquid from the holding chamber ~~(5, 6)~~ into the interior ~~(2)~~ on the basis of the measured vibration parameter.

2. (currently amended) The valuables case as claimed in claim 1 ~~or as claimed in the precharacterizing part of claim 1, characterized in that~~ wherein the at least one holding chamber is in a form, on all sides of the housing of the valuables case, such that it is not possible to penetrate the walls ~~(8, 12)~~ of the valuables case through to the interior ~~(2)~~ using a tool without penetrating the at least one or one of the holding chambers ~~(5, 6)~~.

3. (currently amended) The valuable case as claimed in claim 1 ~~or 2~~, characterized in that ~~wherein~~ the measuring and triggering device has a measuring and control computer (13).

4. (currently amended) The valuable case as claimed in claim 1, ~~2 or 2~~, characterized in that ~~wherein~~ the measuring and triggering device has a vibration generator (14) and a sensor element (15) which are arranged in the at least one holding chamber (5).

5. (currently amended) The valuable case as claimed in ~~one of the preceding~~ claims, characterized in that ~~claim 1, wherein~~ the at least one vibration generator (14) and/or the sensor element (15) are in the form of a piezoactuator.

6. (currently amended) The valuable case as claimed in ~~one of the preceding~~ claims, characterized in that ~~claim 1, wherein~~ the piezoactuator is in the form of a piezofilm.

7. (currently amended) The valuable case as claimed in ~~one of the preceding~~ claims, characterized in that ~~claim 1, wherein~~ the piezofilm covers the entire wall structure of the valuable case apart from functional areas for authorized securities withdrawal.

8. (currently amended) The valuables case as claimed in ~~one of the preceding~~
~~claims, characterized in that~~ claim 1, wherein at least one or more of the walls (8, 12)
of the valuables container are in the form of double walls which form interior cavities
(10, 11) for holding the liquid (7).

9. (currently amended) The valuables case as claimed in ~~one of the preceding~~
~~claims, characterized in that~~ claim 1, wherein the valuables case (1) has a base
container (3) and a lid (4) sealing the base container (3).

10. (currently amended) The valuables case as claimed in ~~one of the preceding~~
~~claims, characterized in that~~ claim 1, wherein the valuables case (4) is produced using
a thermoplastic method.
